# AXA HOME SECURITY

**WITH A HISTORY GOING BACK 110 YEARS, AXA IS AN AUTHORITY IN SUPPLYING DOOR AND WINDOW FITTINGS AND HAS BUILT UP AN EXCELLENT NAME FOR ITSELF, ESPECIALLY IN THE FIELD OF BURGLAR-PROOF SECURITY PRODUCTS.**

As specialists with knowledge of door and window fittings, AXA can offer good and fast solutions. Every day a team of specialists works on the development, production and marketing of AXA quality products - quality that is demonstrated in the materials used, the dimensional stability, the finish and the lifespan of the products. But also the quality you see in delivery reliability, extensive documentation and expertise of our staff.

 luckily there's AXA

# Quality takes first place at **AXA**

## NEN 5089

The NEN 5089 is a Dutch standard, which specifies the requirements and test methods for the classification of burglary-resistant door and window fittings.

Demands are made on burglar-resistance, durability and corrosion-resistance in order to determine the burglar-resistance class.

## BRL 3104

The BRL 3104 is a National Evaluation Guideline that was established by the SKG College of Experts for Secure and Burglar-resistant products.

A PRODUCT DOES NOT LEAVE OUR FACTORY BEFORE PROVING THAT IT FULLY MEETS OUR HIGH DEMANDS ON QUALITY, PERFORMANCE AND DURABILITY. THAT IS WHY ALL OUR PRODUCTS HAVE A **10-YEAR GUARANTEE.**

The conditions of this guarantee can be found on **[axahomesecurity.com](http://axahomesecurity.com)**

# SKG

The Façade Construction Quality Foundation (STICHTING KWALITEITSCENTRUM GEVELBOUW (SKG)), is an independent body that has ensured that security products meet the demands of the Dutch NEN 5089 standard and the Evaluation Guideline BRL 3104 in respect to strength and durability for more than 35 years. The SKG hallmark is awarded to each individual product. The following classifications are possible:

## standard

These are products that will slow burglar entry by at least three minutes when combined with other burglar-resistant provisions.

## heavy duty

These products individually slow down entry by burglars by at least three minutes.

## extra heavy duty

These products individually slow down entry by burglars by at least five minutes.

# AXAflex Combi-stays

THANKS TO A WELL-THOUGHT-OUT CONCEPT FOR AN ALL-IN-ONE AWNING **WINDOW OPENER AND CLOSER**, THE AXAFLEX HAS BECOME A FAMILIAR FITTING IN MANY HOMES, OFFICES AND INDUSTRIAL PREMISES.

# COMBI-STAYS

## ALL-IN-ONE OPENER & CLOSER

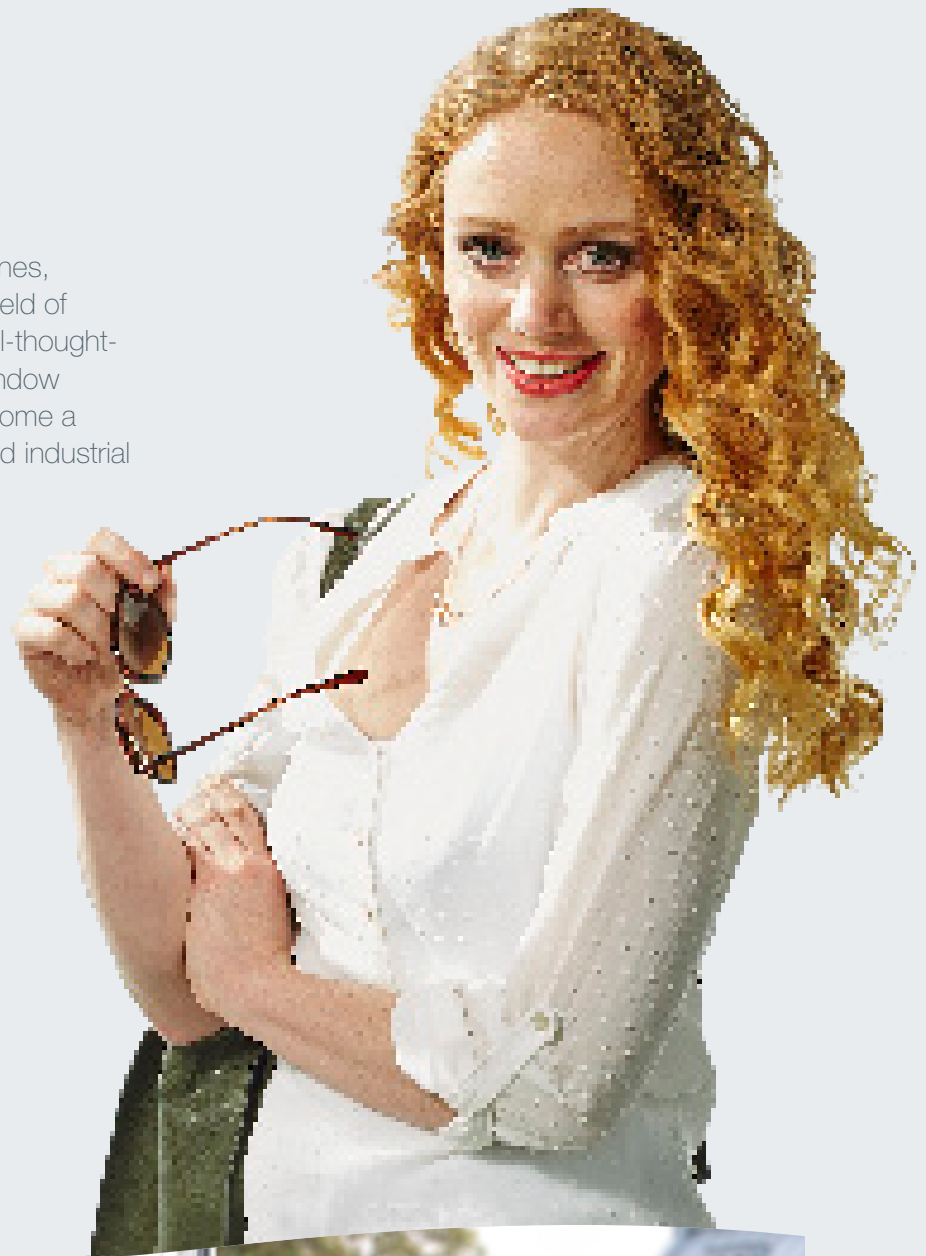

Combi-stays, in particular the AXAflex ones, have been the leading products in the field of ventilation for decades. Thanks to a well-thought-out concept for an all-in-one awning window opener and closer, the AXAflex has become a familiar fitting in many homes, offices and industrial premises.

## HINGED

The AXAflex is hinged and can be used on wooden, plastic and metal windows and frames.

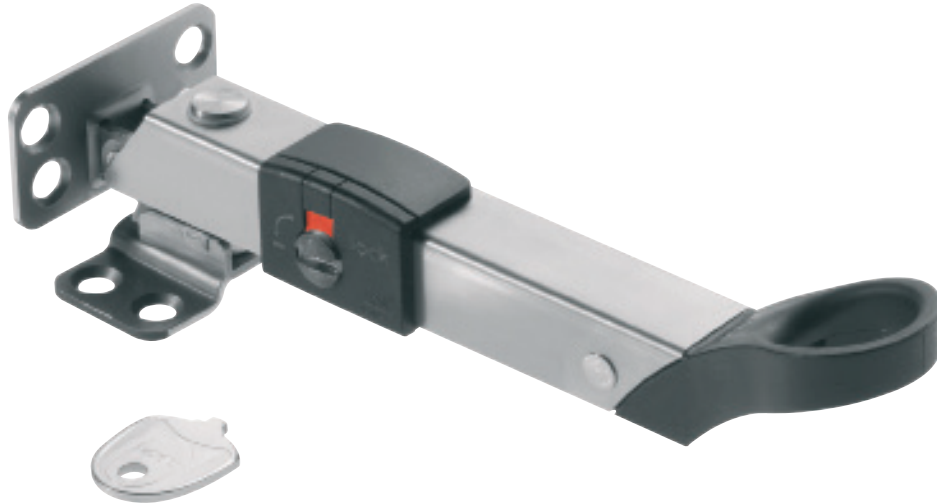

## AXAFLEX SECURITY

With the arrival of the AXAflex Security, which meets the demands of burglary-resistance in accordance with the Building Decree and Police Hallmark for Safe Living, an awning window or top-hung window can be well protected.

# Tele- scopic stays

THE TELESCOPIC STAYS CAN  
BE USED ON **OUTWARD** AND  
**INWARD OPENING WINDOWS.**

# TELESCOPIC STAYS

## EASE OF OPERATION

Ease is in one word the most important feature of the AXA telescopic stays. They are equipped with a damping spring to absorb sudden shocks properly and with a steplessly adjustable double brake mechanism, which can be adapted to personal preferences. Set once to the desired friction and never touch it again!

## EASE OF INSTALLATION

The window bracket is more easy to access. This not only shortens the installation time of the stay considerably, but also ensures correct and straight alignment.

## INWARD AND OUTWARD-OPENING WINDOWS

The telescopic stays can be used on windows which open either outwards or inwards. It is standard practice to mount them on the bottom sill, but they can also be fixed to the top of the window casing. This is very practical when airing bedding. The telescopic stays can also be put to excellent use on awning and top-hung windows. One or two on the side jambs in combination with a window fastener on the centre sill gives perfect ventilation.

## DOORS

Telescopic stays can also be used on doors. Doors are often closed, but situations also occur where it is necessary to keep the door open. The heavy-duty versions, types 35 and 50, will ensure a stable, open position.

# TYPE 20

outward opening

Inward opening

## TYPE 20 EX / IN

Window	Material	Plastic colour	Length	Item number
