

GUIDE: HOW TO HANDLE YOUR CHRISTMAS TREES AFTER DELIVERY

Please follow the below instructions to ensure your trees are displayed in the best possible way and they remain looking good whilst staying fresh throughout the selling period.

1. Carefully remove the trees from the pallet upon arrival at the store. All trees must be removed from the pallets within 48 hours of arrival.

2. Carefully cut the netting, using a pair of scissors or a safety knife, starting at the bottom and working your way up the tree. Be careful not to damage the branches.

3. Bang the tree firmly on the ground to dislodge any loose needles and insects, clearing away any debris that's left on the ground.

4. Place the trees in the display area, standing upright.

5. Spray water over the trees every few days, if the weather is dry, using a hosepipe. This will help to keep the foliage fresh.
